

Parallels® Plesk Panel Web Hosting Server Administration Software for Linux

The award-winning Parallels Plesk Control Panel provides the most complete and stable Linux server management software available. From rebooting your server to managing mail, Plesk is an easy-to customize, easy-to-use tool for hosting service providers and system administrators, regardless of technical experience or skill sets.

Specifically designed for the hosting service industry, Plesk enables the efficient management of numerous virtual hosts on a single machine, helping to support increased profitability per server.

BACKED BY FANATICAL SUPPORT®

Every provider claims to deliver excellent support. But at Rackspace®, support isn't just a claim. We take full ownership of all issues and questions related to supported Plesk modules. Our Fanatical Support means just that—an all-out, no excuses, absolute commitment to doing whatever it takes to ensure that all our customers are 100% satisfied, 100% of the time.

For Plesk solutions, Fanatical Support means solid benefits at many levels:

- While many providers simply license and install control panels, Rackspace provides full administration assistance.
- Our Technical Support Team is extensively trained on the product and ready to answer the most complicated questions.
- We have a strong relationship with Parallels, the company that develops Plesk, and are able to escalate issues to them as necessary and get a prompt response.

Worry-free Migrations

Plesk includes the Plesk Migration Manager, a fast and reliable solution for moving your hosted servers to the leading control panel. Thoroughly tested on hundreds of production servers, Migration Manager has been especially designed for the commercial, trouble-free movement of customers from either alternative control panels or legacy Plesk installations to the latest version of Plesk.

Easy to Adapt and Customize

Harness your creativity and build your business around Plesk with customizable installation options and a desktop that can be easily tailored with new graphic designs and branding choices.

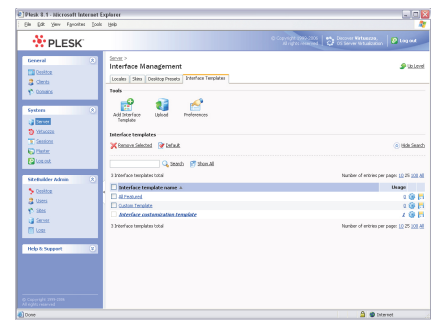

Plesk can also be quickly integrated with a wide variety of third-party applications to create a solution that tightly fits the specific demands of your business and significantly increases the usability and flexibility of the software.

CLICK THUMBNAIL TO ENLARGE

Desktops can be easily customized to provide users with quick access to essential tasks and statistics. Every part of the new Desktop can be hidden or removed completely from the interface, making it cleaner and simpler to use.

Parallels® Plesk Panel

Support for Worldwide Markets

Plesk can enable a different default language¹ to be selected during installation and includes complete support for the International Domain Naming conventions and their characters. The interface includes UTF8 special character support that recognizes specific language characters from countries around the world. Your users will feel comfortable and appreciate the local flavor of their user interface.

A Modular Solution

Plesk includes an all-new set of modules for third-party application integration², including a powerful API and an expanded, customizable Application Vault for managing dozens of integrated applications. Volumes of functionality are now instantly at your fingertips for selection, eliminating the need for manual third-party software integration. You can plug and play with popular ColdFusion and Tomcat support tools or even deploy and manage PostgreSQL databases right from the user interface.

Plesk for Resellers – Tailored to Fit your Customers' Needs

The extensive feature set of Plesk allows you to easily automate many aspects of your hosting business, including quick and worry-free product installations, rich auto-provisioning functions and the effective management of large numbers of email accounts.

Better yet, user profiles can be assigned to provide customers with tailored views of Plesk, enabling them to utilize only the most relevant functionality. A personalized interface with robust capabilities is designed to support easy self-administration and a dramatic reduction in support calls.

Building on its recognized stability, completeness, ease of use and value, Plesk creates a new standard for control panels. Ask your Rackspace sales representative for more details about Plesk.

Rackspace supports Parallels Plesk Panel on RHEL 5 and RHEL 6 as well as many add-on modules sold by Rackspace, such as SpamAssassin and Dr. Web Anti-Virus.

SpamAssassin Anti-Spam Software

Include this add-on and eliminate spam. Plesk includes an option to integrate the proven SpamAssassin anti-spam software into the control panel. A built-in configuration interface can be easily used to apply spam rules per server or per mailbox.

Plesk AntiVirus by Dr. Web

This award winning, server-level virus program can be delivered downstream for pennies. Plesk AntiVirus filters and helps prevent today's nastiest worms, Trojans and viruses from ever reaching your customers. Virus protection is now a lot more affordable.

¹ Requires purchase of all modules.

² Rackspace supports the Plesk Tools for third party applications, but not the third party applications themselves.
