Rackspace Private Cloud powered by OpenStack Swift is a storage solution that delivers the scalability, agility and efficiency of a public cloud with the enhanced security, control and performance of a dedicated environment. It can be deployed in your data center or ours, is managed by our OpenStack experts and backed by Fanatical Support®. Rackspace Private Cloud gives you all the power of the cloud without the pain of running it.

**Advantages of a Rackspace Private Cloud Object Storage (Swift) Solution:**

- **Scalability and Support** – Provides a highly available, dedicated environment designed to scale to petabytes of storage. Our OpenStack experts manage your environment, providing operational support and helping to ensure that the environment quickly adapts to your business’s growing storage demands.

- **Enterprise-Grade Architecture** – Includes an industry-leading 99.99% OpenStack API uptime guarantee and delivers high availability using a professional-grade control plane that includes a clustered database and messaging service. It uses Linux containers for service deployment giving you the flexibility to distribute and independently scale services based on specific workload needs (e.g. deploy compute resources close to the object storage) and perform in-place upgrades from one release to the next.

- **Security and Control of Data** – Provides a dedicated environment in your data center or ours, which includes redundant physical firewalls and allows you to maintain control of your data. It also enables you to use your existing OpenLDAP service to authenticate users helping to ensure only those who are authorized can access your environment.

**Rackspace Private Cloud Object Storage Reference Architecture**

The Rackspace Private Cloud object storage reference architecture is a recommended set of software and infrastructure components designed to provide enterprise-grade scalability, stability and high availability. Additionally, every Rackspace Private Cloud customer has access to our team of architecture advisors who provide workload-specific guidance for planning, designing and architecting a private cloud storage environment.

**All Backed by Fanatical Support**

Rackspace Private Cloud is backed with the results-obsessed service that we call Fanatical Support. Our exceptional service means we’re in it with you every step of the way and includes:

- A dedicated account manager and dedicated OpenStack engineer* who know the specifics of your private cloud environment
- A dedicated team of OpenStack experts available 24x7x365
- Proactively monitoring and maintaining the health of your cloud 24x7x365
- Industry-leading 99.99% OpenStack API uptime guarantee
- 15-minute live response time guarantee to any emergency ticket with Object Storage support
- 100% network uptime guarantee and one-hour hardware replacement guarantee at no cost when hosted in a Rackspace data center
